

W SS[®] - 435

Product technical specification

W SS[®] - 435 is an oil repellent for solvent-based coatings . It can be used to solve the problem of shrinkage on the surface of the coating caused by the contamination of metal, polymer and wood substrates due to the pollution of the release agent and lubricating oil, and improve the wetting of the substrate. It can also promote the leveling performance of the coating film .

- used in solvent-based formulations
- Greasy resistance
- Extra leveling effect
- No solvent

Recommended Applications

It can be used in all solvent-based coating systems, industrial paints, wood paints, and baking paints .

Recommended adding amount : 0 .01 % - 0.3 %

Technical data

- Supply form : liquid
- Active matter content : 100%

chemical composition

Organically modified polysiloxane

Process Description

- When used in paint formulations, it is recommended to add in the grinding stage
- Stir before use
- Pre-dilution with the recommended solvent will facilitate adding and mixing
- It can be pre-diluted or directly added to the paint in the form of supply

package

- 25 kg , plastic bucket
- 200 kg , iron drum

Storage stability

Store in unopened original packaging and use within 12 months from the date of production .
