

WSS760

Product technical specification

WSS760 is used in substrate wetting and anti-cratering, little foam

- ultra low surface tension
- Excellent substrate wettability and permeability
- Excellent resin miscibility
- Low foam stability

Recommended application , recommended dosage

Water-based varnishes and paints ; solvent-based systems and radiation curing

systems can also be used

Based on the supply form to the total formula: 0.1-1.0%

Technical data , chemical composition

Polyether modified polydimethylsiloxane

- Appearance : light yellow transparent liquid
- Active matter content : 100%

Process Description

Pre-diluted or directly added as supplied

Packaging and storage stability

- 25 kg ○ 200 kg iron drum or plastic drum

Store in unopened original packaging and use within 12 months from the date of production .
